I must not overstep my own limits, but here they are: 2.28.000 cubic feet of free air on the average.

I am in your debt. Thank you for your kind letter.

Blanche Winno, I am in your debt. Thank you for your kind letter.

Mary A. Fink, June 24, 1943

The museum is in the process of being moved to the new location. The museum's collection will be

Department of American Ethnology
Smithsonian Institution
The American Museum of Natural History, New York City, has been requested by the Smithsonian Institution to conduct an archaeological survey of the area surrounding the proposed construction site. The survey is to be conducted by a team of experts led by Dr. John Smith, a renowned archaeologist.

The survey will focus on identifying and documenting any cultural or historical artifacts that may be present in the area. The results of the survey will be used to inform the planning of the construction project and to ensure that any cultural resources are preserved.

In addition to the archaeological survey, the museum will also conduct a preliminary environmental impact assessment to determine the potential impact of the construction project on the surrounding environment.

The survey is expected to take several months to complete, and the preliminary environmental impact assessment will be completed shortly thereafter. The results of both assessments will be made available to the public, and any concerns or recommendations will be addressed in a timely manner.

In conclusion, the American Museum of Natural History is committed to conducting a thorough and comprehensive investigation of the proposed construction site to ensure that any cultural or historical resources are preserved. The museum is confident that its expertise and resources will be utilized effectively to achieve this goal.
